

WAX REMOVER FOR WATER-BASED WAXES

Original name: Decerante per cere all'acqua

Product Description

The Novecento wax remover for water-based waxes is essential if you want to completely remove from the floor the layers of wax that have accumulated over time.

Use

Dilute the wax remover with water (1 part of water and 3 parts of wax remover). Spread evenly rubbing with a cotton cloth and let it work for about ten minutes until you see a mush on the floor.

If the wax layer is very thick, use the wax remover pure. If instead the layer is not particularly thick, you can dilute more: 1 part of water and 1 part of wax remover

Rinse thoroughly and many times in order to remove every wax and wax remover residue.

Let it dry completely before applying the chosen finishing.

Coverage: 20 m²/L

Tip!

Diluting 1 glass of wax remover in 5 litres of water you can obtain a very good floor cleaner for the daily cleaning. In this case rinsing is NOT required
